

Claims

1. A trim panel (10), suitable for attaching to a displaceable seat (1), in particular a vehicle seat, the seat (1) having a seat component (3) which can be displaced relative to at least a first part (25) of a seat substructure (2), the first part (25) of the seat substructure (2) being movable essentially horizontally together with the seat component (3) in relation to a second part (26) of the seat substructure (2), characterized in that the trim panel (10) largely conceals at least the first part (25) of the seat substructure (2) and can be displaced together with the displaceable seat component (3).
2. The trim panel (10) as claimed in claim 1, characterized in that the seat component (3) comprises a seat cushion (31).
3. The trim panel (10) as claimed in one of the preceding claims, characterized in that the seat component (3) comprises a seat shell (32).
4. The trim panel (10) as claimed in one of the preceding claims, characterized in that the first part (25) of the seat substructure (2) has at least a frame (24) essentially encircling the seat shell (32).
5. The trim panel (10) as claimed in one of the preceding claims, characterized in that the frame (24) runs essentially in the plane (34) of the seat shell (32).
6. The trim panel (10) as claimed in one of the preceding claims, characterized in that at least part of the seat component (3) has a decorative surface

(33), the decorative surface (33) at least partially covering the trim panel (10).

7. The trim panel (10) as claimed in one of the preceding claims, characterized in that the trim panel (10) has locking elements (13) for locking the decorative surface (33) in place.

8. The trim panel (10) as claimed in one of the preceding claims, characterized in that the trim panel (10) has stiffening elements (14), in particular in the form of ribs.

9. The trim panel (10) as claimed in one of the preceding claims, characterized in that the trim panel (10) covers at least the first part (25) of the seat substructure (2) at least partially in the manner of a skirt and in the normal viewing direction of a user.

10. A seat (1), in particular a vehicle seat, with a seat substructure (2) and a displaceable seat component (3), characterized in that the seat (1) has a trim panel (10) as claimed in one of the preceding claims.

11. The seat (1) as claimed in claim 10, characterized in that the displaceable seat component (3) can be adjusted in inclination and/or can be adjusted in height relative to the first part (25) of the seat substructure (2).

12. The seat (1) as claimed in claim 10 or 11, characterized in that the trim panel (10) at least on one side of the seat (1) conceals at least the first part (25) of the seat substructure (2) from a lateral viewing direction.
